

For Immediate Release

Mx Supplier Collaboration® Solution Highlighted by American Machinist

Cleveland, Ohio - **e-Ventus Corporation**, a leading solutions provider for e-Business and e-Collaboration solutions,

“System untangles supply-chain problems

Supply-chain communications and transactions were stalling Bendix CVS’s global expansion. For one of its Chinese castings supplier, the Elyria, Ohio, vehicle-parts maker faxed weekly updates on Tuesdays and followed up with off-hour e-mails or voicemails to confirm releases or track shipments. The Chinese company then manually compared the information to its own schedule before responding. This type of back-and-forth communication took as long as a week, and the problem was further magnified when dealing with Bendix’s other 219 suppliers.

Bendix solicited the help of e-Ventus who suggested its e-business software solution, called Mx Supplier Collaboration, for complex supply-chain-management problems. It’s a web-based program that requires only Internet access.

Mx Supplier Collaboration operates in a secure Internet environment and provides categories of real-time information. For instance, its supplier and planner portals list release data and shipment activity. A shipment module tracks shipments in real-time, and a message board does the work of e-mails and phone calls. Company planners update procurement and production schedules or exchange purchase orders and promises-to-ship on-line.

By streamlining its supply chain with MX Supplier Collaboration, companies like Bendix move toward becoming more globalized. The system lets them find the best quality and lowest-cost products and communicate with suppliers any time.”

According to Joe LaMantia, president of e-Ventus Corporation, “Mx Supplier Collaboration® continues to transform the business processes of enlighten firms that are seeking to leverage the power of web technology and the Internet and provide them with significant competitive advantages through quicker cycle time, reduced costs, improved visibility and knowledge management .”
